

6/8/21 LCD Tech Team

Attendees: Sean, Aubin, Danielle, Kathy, Ken, Mary, Matt, Peggy, Phil

- Phase 1 Report overview (sean)
 - Outputs that we got from Phase 1 are nothing we will stand behind in a scientific way, but they were a test of process
 - Developed synthetic output materials
 - The report is a summary of the metadata and “ah-ha” moments
 - Contents
 - Introduction
 - Links back to goals, objective, feature selection process
 - Data resources
 - Challenges of disparate data
 - Technical review
 - Input from technical team, presentation to the leadership team
 - Specific process steps for features
 - A deep dive into how we processed the data, and any challenges that arose - THIS IS THE MOST CRITICAL SECTION FOR YOU TO REVIEW
 - Specific ask: give the document a read, and please make suggested edits
- Comments:
 - For Westslope Cutthroat, it says something about “consulting experts” to make edits?
 - An initial look at the data, and you can see hard breaks in WSCT presence across borders into AB - proportionally, it seems AB has significantly less WSCT habitat than other jurisdictions - is this accurate, or is it a data issue? We will consult native salmonids experts to confirm!
 - There is a Mischaracterization of data source - please edit/make suggestions if you see this
 - Goal: complete edits by the next leadership team call - around June 22nd
